

## F-Secure Mobile Anti-Virus

### Today's Challenges

Mobile viruses have become an everyday problem for smartphone users. Viruses can cause false billing, unwanted disclosure of stored information, and delete, corrupt, or prohibit use of the phone. Protection against harmful content is required on every smartphone.

### The Solution

The easiest and the most efficient way to get the required protection is a wireless antivirus service, which allows automated distribution of the antivirus software and updates directly to mobile devices over a wireless connection.

F-Secure® Mobile Anti-Virus™ keeps your smartphone and data safe with real-time protection. Taking just minutes to install, it constantly works in the background to protect your smartphone and data. You don't need to be an expert to professionally protect your smartphone.

F-Secure Mobile Anti-Virus is easy to use and does not require excess device resources or unnecessary user interaction. It automatically scans all files in the background, both in the device and on the memory cards. When an infected file is detected it is immediately quarantined to protect all other data in the system. The antivirus database is updated invisibly in the background when a data connection is used for emails, web browsing etc. Critical updates are delivered via push SMS.

Get your free trial and see the list of supported devices from the F-Secure Mobile Portal under [mobile.f-secure.com](http://mobile.f-secure.com)

### Key Features

Stops mobile malware from Bluetooth viruses to MMS worms and trojans

Intelligent proactive detection stops most viruses without need for antivirus updates

Guards all potential malware entry points

Automatic over-the-air antivirus updates from the F-Secure Security Labs when a new threat is detected

Automatic detection of data connections (e.g. GPRS, Wi-Fi, UMTS) for updates without need for user interaction

Includes firewall for supported devices

Wide support for both legacy smartphones and latest models right from the beginning

The ideal operator service solution with a proven hosting environment and smooth billing integration

Advanced enterprise management features and reporting

## F-Secure Mobile Anti-Virus for Operators and Device Vendors

F-Secure Mobile Anti-Virus has been specifically designed for the needs of mobile operators. The solution is scalable and can be applied from small local operators to major international players.

F-Secure has developed its mobile antivirus operator solution for years with a proven track record of successful implementation projects. F-Secure is able to manage integrations to any 3rd party interfaces and to create tailored operator-specific clients.

Nokia ships various phone models with F-Secure Mobile Anti-Virus pre-installed on the device. Pre-installation can also be done easily by device vendors to operator variants. F-Secure has experience of various business models and distribution mechanisms.

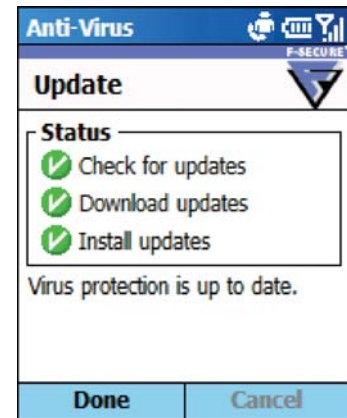

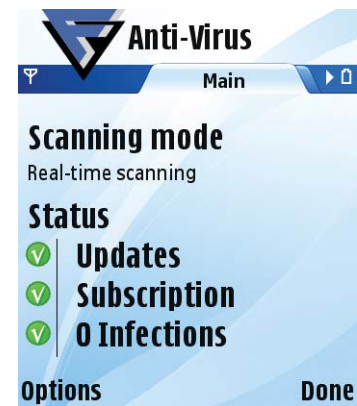

## F-Secure Mobile Anti-Virus for Businesses

Using the F-Secure Mobile Services management interface, a company IT administrator can easily monitor the protection and wireless antivirus service status of all company smartphones. The administrator can add more smartphones to the company-specific account, send the service activation code as an SMS message directly to the phones, and monitor the service subscription status of all company smartphones with a standard web browser.
